- 5 From the general SPD standard:** The descriptions of bytes 64–127 are repeated here For Reference ONLY. Manufacturers MAY include information which is pertinent to their particular modules, place and date of manufacture, etc. If a module manufacturer decides to write data into bytes 64–127, they must follow the format and order presented below. If a module manufacturer chooses not to include the data outlined below, they must leave bytes 64–127 unprogrammed; blank state of these bytes may be 00h or FFh. Detailed implementation of bytes 64–127 is detailed below in paragraphs 5.X:

- 5.1 Bytes 64–71, Manufacturers ID code per EIA/JEP106.** Manufacturers of a given module may include their identifier per Jedec spec JEP106. 00h is not allowed and FFh indicated continuation. The first byte is utilized, the second byte filling. Unused locations/bytes should be FFh.
- 5.2 Byte 72, Manufacturing Location.** Manufacturers may include an identifier which uniquely defines the manufacturing location of the memory module. While the SPD spec will not attempt to present a decode table for manufacturing sites, the individual manufacturer may keep track of manufacturing location and its appropriate decode represented in this byte.
- 5.3 Bytes 73–90, Manufacturer’s Part Number:** Manufacturers may include their part number in 6–bit ASCII format within these bytes.
- 5.4 Bytes 91–92, Revision Code:** This refers to the module revision code. While the SPD spec will not attempt to define the format for this information, the individual manufacturer may keep track of the revision code and its appropriate decode represented in this byte.
- 5.5 Bytes 93–94, Date of Module Manufacture:** The module manufacturer may include a date code for the module. Specifically, byte 93 may contain the year in Binary and byte 94 may contain the week in Binary.
- 5.6 Bytes 95–98, Module Serial Number:** The supplier may include a serial number for module. The supplier may use whatever decode method desired to maintain a unique serial number for each module.
- 5.7 Bytes 99–125, Manufacturers specific data, open area:** The module manufacturer may add any additional information desired into the module within these locations.
- 5.8 Bytes 126–127, Reserved:** These bytes are reserved and cannot be later allocated.
